RESEARCH INTEGRITY
Analyzer

Join the Research Integrity App Project

We're building a web and mobile app that analyzes scientific papers and detects potential

conflicts of interest between authors, institutions, and funding sources.

The goal: make research transparency accessible to everyone.

The frontend is done — a working PWA already running on iPhone.

Now we're looking for a backend / iOS developer to help connect the analysis engine and launch it officially.

It's a non-profit project; publication and hosting costs are covered. If you're interested in science, AI, and meaningful projects, get in touch.

Contact: Scan the QR code or message on WhatsApp → +34 681 864 143
